

MATTRESS FOAM

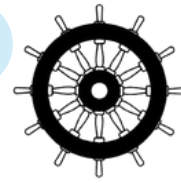

Our foam mattresses are specifically designed for marine and offshore environments, providing reliable support and long-lasting comfort without the use of springs.

Manufactured from viscoelastic (memory) foam, the mattress responds to body heat and adapts to the sleeper's shape and weight, ensuring optimal pressure distribution and consistent support.

All mattresses are IMO/MED certified and delivered rolled and vacuum-packed for easy handling and installation on board.

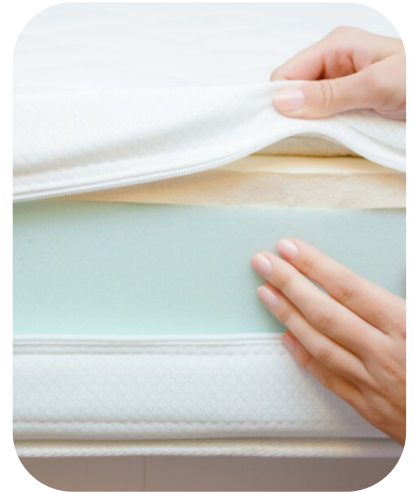

Key features:

- Available as top mattress (5–10 cm) or full foam mattress (from 15 cm)
- Optional handles for easy handling
- Hypoallergenic, antibacterial, and anti-mite
- High durability with excellent shape retention (non-deformable)
- Designed to meet the demands of onboard living, combining comfort, hygiene, and durability for crew use.
